'Dr. Patentstein' and

P A T E N T . I N F O

introduce

the PATENTSTEIN Browser™

...next-generation Internet teamware that provides the framework for patent searchers and their clients to collaborate virtually, effectively, globally.

With the Patentstein Browser, the modern searcher effortlessly captures, summarizes and allocates patent search results found anywhere on the Web.

Searchers can work individually or collaboratively together toward one common objective: providing clients with the highest level of service, in the most efficient manner possible.

THE NEED

Consistent with the public policy to promote the wide disemmination of technical information, more and more patent search data is becoming publicly available on the web. Therefore, it's becoming more and more difficult to justify the costs associated with accessing expensive proprietary databases for which there's a charge associated with every transaction. The simple fact is that more and more technology managers are performing their own patent searches. The Patentstein Browser takes advantage of this continuing trend by providing the searcher and technology manager with a tool pointing them to the latest publicly-available sources of technical data, as well as allowing them to access, capture, edit, organize, and share this patent information in a re-useable form. The Patentstein Browser -- an essential tool for the modern patent info professional.

RESEARCH + PATENTSTEIN = STORED EXPERTISE

Technology managers, executives and IT professionals will appreciate the Patentstein Browser's intuitive design, productivity and administrative features: the Patentstein Browser leverages and integrates the best aspects of the Microsoft suite while providing an extended feature set designed for the information professional. The Patentstein Browser silently captures and converts patent search results into technical expertise, stored in a Project-Based Browsing (PBB) file that you can edit, store and share.

REAL-TIME DOCUMENT COLLABORATION

Many applications provide briefcase functionality designed for the end-user. The Patentstein Browser takes this to a new level by enabling you to selectively and securely share the results of your search over the Web. And of course, your documents are always associated with the appropriate project, where you, your colleagues and clients may securely access them from anywhere, at any time.

POWERING YOUR VIRTUAL WORKGROUP

The Patentstein Browser's collaborative elements extend beyond patents and beyond browsing. Server-side chat rooms let you communicate privately in real time with clients, partners and service providers alike. Project Centrale organizes your collective research into summary and statistical information. TrailTracker provides a means for others to follow your search, by personalized tour, navigational history, or bookmarks, arranged in the order you deem most efficient.

SECURE TEAMWARE

Peer-to-Peer solutions can be great for end-users, but are a nightmare to administer. Server-side applications are easy to maintain but are often inflexible from the users' perspective. The Patentstein Browser leverages the best of Peer-to-Peer and client/server architecture by giving users the collaborative tools they need while providing centralized administration, control and reporting. Our pioneering technology lets users work together on both sides of the firewall, extending a virtual shield over their data as they blaze trails through the net.

PATENT SEARCHING

The Patentstein Browser comes loaded with web links to online patent information and other patent resources. More easily create specific project files including keyword queries that you can use to re-run your search at a later date, to review changes in the state of the art. Download updated search files from time to time, to keep current with the latest online sources. Save search results to prove Due Diligence in case of litigation.

HARDWARE REQUIREMENTS

233 Mhz Pentium (or higher) is recommended with at least 32MB RAM
